Product Case Study

Client: Cairn Cross Civil Engineering Limited
Project: Manchester Tram Depot (Queens Road)

The benefit in using the Right Angles formwork kit:

- ✓ By using the formwork, we were able to put together our shuttering far quicker, with its simple connector joints the kit was ready for the concrete pour within minutes.
- ✓ Right Angles offered Health and Safety benefits, as the angles are light work and pre-formed to the correct shape, thus meaning less time is spent manually handling them and working at height.
- ✓ When the concreting works were finished we were able to clean & re-use the kit again as it is easy to store.
- ✓ As a result of using Right Angles, we were able to complete all of our concrete works with a chamfered edge, ahead of programme and with cost savings. We have since completed a large number of projects with the same kit.

- ✓ Produces a consistently smooth and accurate finish
- ✓ Re-usable - reducing environmental impact
- ✓ Time saving, fast, easy installation
- ✓ Reduces waste, material, installation time and remedial works
- ✓ Radius nailing flange reduces grout loss
- ✓ All components manufactured to ISO 9001
- ✓ Only cutting to length required reducing hand injury risks
- ✓ Made in the UK and fully recyclable

Got it nailed!
