Right Angles are proud to announce the introduction of a new and exciting development in concrete formwork

Traditional methods involve a skilled workforce cutting materials by hand to form chamfered edges and corners which is time consuming with associated costs. Plus, the results and quality are also solely dependent on the skills of the craftsman.

This brand new innovative concrete corner kit removes waste and uncertainty when pouring concrete. Ensuring consistently high quality results every time.

The system is modular and reusable, time and time again.

Andy Bald Managing Director of Right Angles comments,

"As a shuttering joiner myself I wanted to create a more effective way of forming corners as I found many hours were being wasted on site. Right Angles has been designed to do exactly that. This simple system produces a consistently smooth and accurate finish every time. It reduces waste, material, installation time and remedial works"

Product Features and Benefits

- Purchased as a kit – this modular system includes preformed angles and corners to build reinforced structures - gets the right finish every time

- Produces a consistently smooth and accurate finish – extensively reduces grout loss and the need for rubbing up, saving time and money
- Only cutting length of fillet required, no need to cut corner angles – reduces hand injury risks
- Radius nailing flange – reduces grout loss and honeycombing
- Can be installed quickly to a high quality– saves time and labour costs
- Re-usable & recyclable – reduces environmental impact
- Hard wearing and easily cleaned - increases production, finish on time
- Proven field results – hard wearing – resealable – easily cleaned
- Made in the UK - all components manufactured to ISO 9001
- Up to 75% Time saving*, fast, easy installation

Right Angles

Right Angles is the manufacturing and production arm of Cairn Cross Solutions Ltd. Cairn Cross Solutions Ltd is the patent holder of the Right Angles brand and trademarks.

It is the policy of the company to continue to develop and manufacture new and innovative products for the construction industry throughout the world.

* In recent UK field trials 75% time savings have been achieved in comparison to traditional methods.
