### Success for Right Angles at Civils 2009

Right Angles launched their new innovative product at Civils 2009 and couldn't have asked for a better response.

Andy Bald, Managing Director comments; "we were a little disappointed with our stand location when we first got to the show, but this had no negative impact what so ever. The stand was always buzzing, and the response was phenomenal. The demand for Right Angles has really taken off with an ever increasing list of distributors throughout the UK and overseas; the best response we could have asked for."

### How does it work?

The traditional method of forming chamfer edges to concrete structures with lengths of timber or plastic fillet is now replaced with Right Angles corner kit that requires no cutting to form perfect 90 degree chamfered corners. Straight lengths of fillet with or without nailing flange are available with jointing pieces and duplex nails. Full details can be viewed on our website: [www.rightangles.uk.com](http://www.rightangles.uk.com)

### Product Features and Benefits

- Purchased as a kit
- Produces a consistently smooth and accurate finish
- Time saving, fast, easy installation

- Eliminates remedial works
- Radius nailing flange reduces grout loss
- All components manufactured to ISO 9001
- Only cutting to length required reducing hand injury risks
- Made in the UK and fully recyclable
- Cuts out the need for custom woodworking
- Increases production, finish on time
- Hard wearing and easily cleaned
- Proven in the field results

### **Proven track record**

Right Angles has been tried and tested and recent UK trials have shown more than a 70% cost-saving compared to traditional methods.
